USERS' GUIDE

Catalog Arrangement and Indexes

The bibliographic entries in the *Monthly Catalog* are arranged in Superintendent of Documents classification number order. Each record is also assigned a unique catalog number, which consists of a two-digit prefix representing the catalog year, followed by a sequential number beginning with 1 in the first issue of each year. Within this arrangement, the publications of each Government author are further identified by the name and address of the issuing agency.

Catalog entries may be accessed by the following indexes:

Author index: An alphabetical list of personal authors, editors, co-authors, corporate authors, and conferences.

Title index: An alphabetical list of titles proper, subtitles, and alternate titles.

Subject index: An alphabetical list of subjects derived from the *Library of Congress Subject Headings*.

Series/Report index: An alphabetical listing of series statements and tracings, series numbers, and report numbers.

Contract number index: An alphanumeric list of contract, grant, and project numbers associated with technical report publications. Abridged cataloging records are not accessible by contract number.

Stock number index: An alphanumeric list of Superintendent of Documents and other sales stock numbers.

Title keyword index: An alphabetical list of truncated titles, arranged by important words selected from publication titles.

A **margin index** on the back cover locates the seven indexes. Listings in all of the indexes are followed by the catalog entry number, which refers the user to the complete bibliographic citation. Listings in the **title** and **subject indexes** are augmented with the publications' author and classification number to enhance identification and retrieval. Cumulative indexes are published semiannually, annually, and quinquennially, and in addition the indexes listed above, include a **Classification number index** for all the publications listed during the period of cumulation.

Abbreviations

The abbreviations used in the bibliographic records in the catalog are those described in the *Anglo-American Cataloguing Rules*, 2nd ed., and the *GPO Classification Manual: A Practical Guide to the Superintendent of Documents Classification System*.

List of Government Authors

This alphabetical list in the preliminary pages of each catalog locates the beginning of the sequence of entries of documents issued by a specific agency. The list is compiled each month and contains only Government authors of documents included in that *Monthly Catalog* issue.

REPORT

1. General Information

This report was prepared for the purpose of providing information regarding the results of the study conducted by the research team. The study was designed to investigate the effects of the proposed intervention on the target population. The results of the study are presented in the following sections.

2. Objectives of the Study

The primary objective of the study was to determine the effectiveness of the proposed intervention in achieving the desired outcomes. The secondary objectives were to identify any potential side effects or adverse reactions associated with the intervention.

3. Methodology

The study was conducted using a randomized controlled trial design. The participants were randomly assigned to either the intervention group or the control group. The intervention group received the proposed intervention, while the control group received a placebo. The study was conducted over a period of 12 weeks.

The data was collected using a standardized questionnaire and a series of laboratory tests. The data was then analyzed using statistical methods to determine the significance of the results.

The results of the study are presented in the following sections. The first section discusses the overall findings, while the subsequent sections provide a detailed analysis of the data.

The study found that the proposed intervention was effective in achieving the desired outcomes. The results were statistically significant, indicating that the intervention had a positive effect on the target population.

There were no significant side effects or adverse reactions reported by the participants in the intervention group. This suggests that the intervention is safe and well-tolerated.

The study was limited by a number of factors, including the relatively small sample size and the short duration of the study. Further research is needed to confirm the findings of this study.

In conclusion, the study found that the proposed intervention was effective and safe. The results suggest that the intervention has the potential to be a valuable tool for improving the health of the target population.

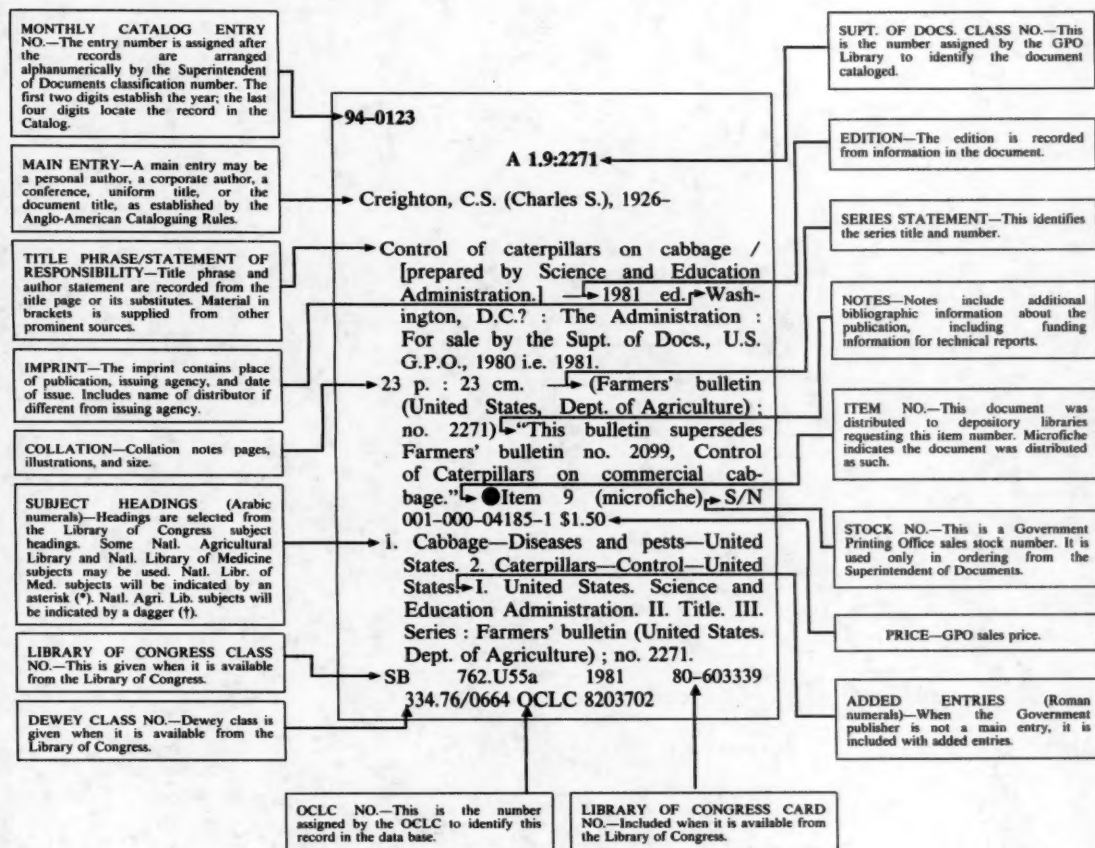

The study was conducted in accordance with the principles of good clinical practice. The results of the study are presented in the following sections.

The study found that the proposed intervention was effective in achieving the desired outcomes. The results were statistically significant, indicating that the intervention had a positive effect on the target population.

FEDERAL DEPOSITORY LIBRARY PROGRAM

The Federal Depository Library Program was established by Congress to provide free public access to Government publications. Nearly 1400 public, academic, State, and law libraries serve as an information link with the Federal Government by maintaining collections of Government publications. These collections, which are tailored to local needs, are open to the public. Fifty-three of the libraries are designated as regional depository libraries. They have the responsibility of retaining material permanently and providing inter-library loan and reference services in their regions. They also assist the other depository libraries with the disposal of obsolete material.

Copies of documents no longer available through the GPO Sales Program can usually be found in regional depository collections. A complete listing of regional depositories follows. To obtain a complete listing of all depository libraries, write to:
